### Question No. 1

You have an application that sends events to an Azure event hub by using HTTP requests over the internet.

You plan to increase the number of application instances.

You need to recommend a solution to reduce the overhead associated with sending events to the hub.

What should you recommend?

- **A.** Configure the application to send events by using the AMQP protocol
- **B.** Reduce the retention period of the event hub.
- **C.** Replace the event hub with an Azure Service Bus instance.
- **D.** Configure the application to send events by using the HTTPS protocol.

**Answer:** A

### Question No. 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are designing an Azure solution for a company that has four departments. Each department will deploy several Azure app services and Azure SQL databases.

You need to recommend a solution to report the costs for each department to deploy the app services and the databases. The solution must provide a consolidated view for cost reporting that displays cost broken down by department.

Solution: Place all resources in the same resource group. Assign tags to each resource.

Does the solution meet the goal?

- **A.** Yes
- **B.** No

**Answer:** B

### Question No. 3

You need to recommend a solution for protecting the content of the back-end tier of the payment processing system.

What should you include in the recommendations?

- **A.** Always Encrypted with deterministic encryption
- **B.** Transparent Date Encryption (TDE)
- **C.** Azure Storage Service Encryption

- **D.** Always Encrypted with randomized encryption

**Answer:** A

#### **Question No. 4**

You manage an application instance. The application consumes data from multiple databases. Application code references database tables using a combination of the server, database, and table name.

You need to migrate the application data to Azure.

To which two Azure services could you migrate the application to achieve the goal? Each correct answer presents a complete solution.

NOTE Each correct selection is worth one point

- **A.** SQL Server Stretch Database
- **B.** Azure SQL Database
- **C.** SQL Server in an Azure virtual machine
- **D.** SQL Managed instance

**Answer:** A, D

#### **Question No. 5**

You plan to deploy 10 applications to Azure. The applications will be deployed to two Azure Kubernetes Service (AKS) clusters. Each cluster will be deployed to a separate Azure region. The application deployment must meet the following requirements:

\* Ensure that the applications remain available if a single AKS cluster fails.

\* Ensure that the connection traffic over the internet is encrypted by using SSL without having to configure SSL on each container.

Which Azure service should you include in the recommendation?

- **A.** Azure Traffic Manager
- **B.** Azure Front Door
- **C.** Azure Load Balancer
- **D.** AKS ingress controller

**Answer:** A
