Question No. 1

What should you create to configure AG2?

- **A.** multi-site listeners
- **B.** basic listeners
- **C.** URL path-based routing rules
- **D.** basic routing rules
- **E.** an additional public IP address

Answer: A

Question No. 2

You need to configure AG1.

What should you create?

- **A.** a multi-site listener
- **B.** a URL path-based routing rule
- **C.** a basic listener
- **D.** a basic routing rule

Answer: B

Question No. 3

You need to recommend an environment for the deployment of App1.

What should you recommend?

- **A.** a new App Service plan that uses the P3v2 pricing tier
- **B.** ASE1 and an App Service plan that uses the I1 pricing tier
- **C.** ASE1 and an App Service plan that uses the I3 pricing tier
- **D.** a new App Service plan that uses the S1 pricing tier

Answer: B

Question No. 4

You need to deploy an Azure load balancer named Ib 1015 to your Azure subscription. The solution must meet the following requirements:

-Support the load balancing of IP traffic from the Internet to Azure virtual machines connected to VNET1016 \subnet0.

-Provide 4 Service level Agreement (SLA) of 99.99 percent availability for the Azure virtual machines.

-Minimize Azure-related costs.

What should you do from the Azure portal?

To complete this task, you do NOT need to wait for the deployment to complete. Once the deployment starts in Azure, you can move to the next task.

- **A.** Step 1: On the top left-hand side of the screen, click Create a resource > Networking > Load Balancer. Step 2: In the Create a load balancer page enter these values for the load balancer: myLoadBalancer - for the name of the load balancer. Internal - for the type of the load balancer. Basic - for SKU version. Microsoft guarantees that apps running in a customer subscription will be available 99.99% of the time. VNET1016\subnet0 - for subnet that you choose from the list of existing subnets. Step 3: Accept the default values for the other settings and click Create to create the load balancer.
- **B.** Step 1: On the top left-hand side of the screen, click Create a resource > Networking > Load Balancer. Step 2: In the Create a load balancer page enter these values for the load balancer: Basic - for SKU version. Microsoft guarantees that apps running in a customer subscription will be available 99.99% of the time. VNET1016\subnet0 - for subnet that you choose from the list of existing subnets. Step 3: Accept the default values for the other settings and click Create to create the load balancer.

Answer: A

Question No. 5

You plan to grant the member of a new Azure AD group named corp 75099086 the right to delegate administrative access to any resource in the resource group named 7509086.

You need to create the Azure AD group and then to assign the correct role to the group. The solution must use the principle of least privilege and minimize the number of role assignments.

What should you do from the Azure portal?

- **A.** Step 1: Click Resource groups from the menu of services to access the Resource Groups blade

Step 2: Click Add (+) to create a new resource group. The Create Resource Group blade appears. Enter corp7509086 as the Resource group name, and click the Create button.

Step 3: Select Create. Your group is created and ready for you to add members. Now we need to assign a role to this resource group scope. Step 4: Choose the newly created Resource group, and Access control (IAM) to see the current list of role assignments at the resource group scope. Click +Add to open the Add permissions pane.

Step 5: In the Role drop-down list, select a role Delegate administration, and select Assign access to: resource group corp7509086

- **B.** Step 1: Click Resource groups from the menu of services to access the Resource Groups blade

Step 2: Click Add (+) to create a new resource group. The Create Resource Group blade appears. Enter corp7509086 as the Resource group name, and click the Create button.

Step 3: Select Create. Your group is created and ready for you to add members. Now we need to assign a role to this resource group scope. Step 4: Choose the newly created Resource group, and Access control (IAM) to see the current list of role assignments at the resource group scope. Click +Add to open the Add permissions pane. Step 5: In the Role drop-down list, select a role Delegate administration, and select Assign access to: resource group corp7509086

Answer: A
