Question No. 1

You have an Azure subscription that contains a virtual machine named VM1. VM1 hosts a line-of-business application that is available 24 hours a day. VM1 has one network interface and one managed disk. VM1 uses the D4s v3 size.

You plan to make the following changes to VM1:

Change the size to D8s v3.

Add a 500-GB managed disk.

Add the Puppet Agent extension.

Attach an additional network interface.

Which change will cause downtime for VM1?

- **A.** Add a 500-GB managed disk.
- **B.** Attach an additional network interface.
- **C.** Add the Puppet Agent extension.
- **D.** Change the size to D8s v3.

Answer: D

Question No. 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription that contains the virtual machines shown in the following table.

Name	Public IP SKU	Connected to	Status
VM1	<i>None</i>	VNET1/Subnet1	Stopped (deallocated)
VM2	Basic	VNET1/Subnet2	Running

You deploy a load balancer that has the following configurations:

Name: LB1

Type: Internal

SKU: Standard

Virtual network: VNET1

You need to ensure that you can add VM1 and VM2 to the backend pool of LB1.

Solution: You create two Standard public IP addresses and associate a Standard SKU public IP

address to the network interface of each virtual machine.

Does this meet the goal?

- **A.** Yes
- **B.** No

Answer: B

Question No. 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an app named App1 that is installed on two Azure virtual machines named VM1 and VM2. Connections to App1 are managed by using an Azure Load Balancer.

The effective network security configurations for VM2 are shown in the following exhibit.

The screenshot shows the Azure portal interface for the 'VM2 - Networking' page. The main content area displays the 'Effective security rules' for the network interface 'VM2-NIC1'. The rules are as follows:

Priority	Name	Port	Protocol	Source	Destination	Action
100	Allow_131.107.100.50	443	TCP	131.107.100.50	VirtualNetwork	Allow
200	BlockAllOther441	443	Any	Any	Any	Deny
65000	AllowVnetInBound	Any	Any	VirtualNetwork	VirtualNetwork	Allow
65001	AllowAzureLoadBalancerInBound	Any	Any	AzureLoadBalancer	Any	Allow
65500	DenyAllInBound	Any	Any	Any	Any	Deny

You discover that connections to App1 from 131.107.100.50 over TCP port 443 fail.

You verify that the Load Balancer rules are configured correctly.

You need to ensure that connections to App1 can be established successfully from 131.107.100.50 over TCP port 443.

Solution: You delete the BlockAllOther443 inbound security rule.

Does this meet the goal?

- **A.** Yes
- **B.** No

Answer: B

Question No. 4

You have an Azure subscription. You need to transfer 34TB of data from an on-premise Windows 2016 server to your Azure storage account. You need to ensure that the data transfer has zero impact on the network, preserves your existing drives and is the fastest and most secure method. What should be your first step?

- **A.** Start an Import Job via the Azure Portal
- **B.** Order an Azure Databox via the Azure Portal
- **C.** Open a ticket with Microsoft Support
- **D.** Prepare your hard drives using the WAImportExport tool The Microsoft Azure Data Box cloud solution lets you send terabytes of data into and out of Azure in a quick, inexpensive, and reliable way. <https://docs.microsoft.com/en-us/azure/databox/data-box-overview>

Answer: B

Question No. 5

You manage a virtual network named VNet1 that is hosted in the West US region. Two virtual machines named VM1 and VM2, both running Windows Server, are on VNet1. You need to monitor traffic between VM1 and VM2 for a period of five hours.

As a solution, you propose to create a connection monitor in Azure Network Watcher. Does this solution meet the goal?

- **A.** Yes
- **B.** No The connection monitor capability in Azure Network Watcher monitors communication at a regular interval and informs you of reachability, latency, and network topology changes between the VM and the endpoint.

Answer: A
