Question No. 1

You have an existing Azure storage account that stores large volumes of data across multiple containers.

You need to copy all data from the existing storage account to a new storage account. The copy process must meet the following requirements:

Automate data movement.

Minimize user input required to perform the operation.

Ensure that the data movement process is recoverable.

What should you use?

- **A.** AzCopy
- **B.** Azure Storage Explorer
- **C.** Azure portal
- **D.** .NET Storage Client Library

Answer: A

Question No. 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are developing a website that will run as an Azure Web App. Users will authenticate by using their Azure Active Directory (Azure AD) credentials.

You plan to assign users one of the following permission levels for the website: admin, normal, and reader. A user's Azure AD group membership must be used to determine the permission level.

You need to configure authorization.

Solution:

Configure and use Integrated Windows Authentication in the website.

In the website, query Microsoft Graph API to load the group to which the user is a member.

Does the solution meet the goal?

- **A.** Yes
- **B.** No

Answer: B

Question No. 3

You need to ensure that the solution can meet the scaling requirements for Policy Service.

Which Azure Application Insights data model should you use?

- **A.** an Application Insights dependency
- **B.** an Application Insights event
- **C.** an Application Insights trace
- **D.** an Application Insights metric

Answer: D

Question No. 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You develop a software as a service (SaaS) offering to manage photographs. Users upload photos to a web service which then stores the photos in Azure Storage Blob storage. The storage account type is General-purpose V2.

When photos are uploaded, they must be processed to produce and save a mobile-friendly version of the image. The process to produce a mobile-friendly version of the image must start in less than one minute.

You need to design the process that starts the photo processing.

Solution: Create an Azure Function app that uses the Consumption hosting model and that is triggered from the blob upload.

Does the solution meet the goal?

- **A.** Yes
- **B.** No

Answer: A

Question No. 5

You develop Azure solutions.

A .NET application needs to receive a message each time an Azure virtual machine finishes processing data.

a. The messages must NOT persist after being processed by the receiving application.

You need to implement the .NET object that will receive the messages.

Which object should you use?

- **A.** QueueClient

- **B.** SubscriptionClient
- **C.** TopicClient
- **D.** CloudQueueClient

Answer: D
